SECTION 08410J

ALUMINUM ENTRANCES
02/05

****
NOTE: This section covers Aluminum Entrances, glass and glazing, and door hardware and components.
****

PART 1 GENERAL

1.1 SUMMARY

1.2 Section Includes

Aluminum Entrances, glass and glazing, and door hardware and components.

Types of Aluminum Entrances Include:

Impact Resistance Entrances; Medium stile, 3-1/2" vertical face dimension, 1-3/4" depth, Interior structural silicone glazed, High traffic/impact resistant applications.

1.4 SYSTEM DESCRIPTION

1.4.1 Entrance Performance Requirements

1.4.1.1 Air Infiltration

For single acting offset pivot, butt hung or continuous geared hinge entrances in the closed and locked position, the test specimen shall be tested in accordance with DCBCCO Protocols PA-202, ANSI A156.10, and ASTM E 283 at a pressure differential of 1.57 psf for pairs of doors. A pair of 6'0" x 8'0" entrance doors and frame shall not exceed 1.2 cfm\ft2.

1.4.2 Structural

Corner strength shall be tested per Kawneer's dual moment load test procedure and certified by an independent testing laboratory to ensure weld compliance and corner integrity. Testing procedure and certified test results per AAMA 503, ASTM E 1105, ASTM E 783, ASTM E 331, DCE/SFBC Section 3508,SBCCI Chapter 12, and must be available upon request.

1.4.2.1 Uniform Load

A static air design load of 85 psf (65 psf for 9/16" laminated infill) shall be applied in the positive and negative direction in accordance with DCBCCO Protocols PA-202, AAMA 501, and ASTM E 330. There shall be no deflection in excess of l/180 of the span of any framing member. At a structural test load equal to 1.5 times the specified design load, no glass breakage shall occur.

1.4.2.2 Impact Resistance

Large Missile, tested in accordance with DCBCCO Protocols PA-201, DCBCCO Protocols PA-203, DCE/SFBC Section 3508, SBCCI Chapter 12, and ASTM E 1886 at a door opening of 6'0" x 8'0".

1.4.2.3 Forced Entry

Tested in accordance with SFBC 3603.2 (b) (5).

1.5 SUBMITTALS

The following shall be submitted in accordance with Section 01330, "Submittal Procedures," in sufficient detail to show full compliance with the specification:

Quality Assurance/Control Submittals:

SD-06 Test Reports

Submit Certified Test Reports showing compliance with specified performance characteristics and UL 325.

SD-07 Certificates

Submit, for Owner's acceptance, Manufacturer's Product Warranty for entrance system as follows:

Warranty Period: Two (2) years from Date of Substantial Completion of the project provided however that the Limited Warranty shall

begin in no event later than six months from date of shipment by manufacturer. In addition, welded door corner construction shall be supported with a limited lifetime warranty for the life of the door under normal use.

1.6 QUALITY ASSURANCE

1.6.1 Qualifications

1.6.1.1 Installer Qualifications

Installer experienced (as determined by contractor) to perform work of this section who has specialized in the installation of work similar to that required for this project and who is acceptable to product manufacturer.

1.6.1.2 Manufacturer Qualifications

Manufacturer capable of providing field service representation during construction, approving acceptable installer and approving application method. Provide three copies of Manufacturer's Product Warranty and Certified Test Reports.

1.6.2 Pre-Installation Meetings

Conduct pre-installation meeting to verify project requirements, substrate conditions, manufacturer's installation instructions, and manufacturer's warranty requirements.

1.7 DELIVERY, STORAGE, AND HANDLING

1.7.1 Ordering

Comply with manufacturer's ordering instructions and lead-time requirements to avoid construction delays.

1.7.2 Packing, Shipping, Handling and Unloading

Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.

1.7.3 Storage and Protection

Store materials protected from exposure to harmful weather conditions. Handle storefront material and components to avoid damage. Protect storefront material against damage from elements, construction activities, and other hazards before, during and after storefront installation.

PART 2 PRODUCTS

2.1 Manufacturers

2.1.1 Design Based On

Kawneer Company, Inc.
555 Guthridge Court,
Technology Park/Atlanta
Norcross, GA 30092
Telephone: (770) 449-5555
Fax: (770) 734-1560

2.1.2 Proprietary Product(s)/System(s)

Kawneer Aluminum Entrances.
Series: 350 IR Entrances
Finish/Color: Interpon D2000 Powder Coating "Midnight Blue"

2.2 Alternate Manufacturers

Alternate manufactures are acceptable providing they meet the requirements and intent identified in this section and project drawings.

2.3 MATERIALS

2.3.1 Aluminum (Entrances and Components)

2.3.1.1 Material Standard

ASTM B 221/B 221M; 6063-T5 alloy and temper

The door stile and rail face dimensions of the entrance doors will be as follows:

Vertical Stile	**Top Rail**	**Bottom Rail**
3-1/2"	3-1/2"	6-1/2"

Major portions of the door members to be .125" nominal in thickness and glazing molding to be .050" thick.

2.3.1.2 Tolerances

Reference to tolerances for wall thickness and other cross-sectional dimensions of entrance members are nominal and in compliance with Aluminum Standards and Data, published by The Aluminum Association.

Glazing gaskets shall be either EPDM elastomeric extrusions or a thermoplastic elastomer.

Structural silicone sealant to be Dow Corning 983 or 995.

2.4 ACCESSORIES

2.4.1 Fasteners

Where exposed, shall be stainless steel.

2.4.2 Perimeter Anchors

When steel anchors are used, provide insulation between steel material and aluminum material to prevent galvanic action.

2.4.3 Standard Entrance Hardware

2.4.3.1 Weatherstripping

Meeting stiles on pairs of doors shall be equipped with an adjustable astragal utilizing wool pile with polymeric fin.

The door weathering on a single acting offset pivot or butt hung door and frame (single or pairs) shall be comprised of a thermoplastic elastomer weathering on a tubular shape with a semi-rigid polymeric backing.

Sill Sweep Strips: EPDM blade gasket sweep strip in an aluminum extrusion applied to the interior exposed surface of the bottom rail with concealed fasteners. (Necessary to meet specified performance tests.)

2.4.3.2 Threshold

Extruded aluminum, one piece per door opening, with ribbed surface.

2.4.3.3 Offset Pivots

Manufacturer standard top and bottom pivots with one intermediate offset pivot.

2.4.3.4 Panic Device

Jackson 2086 Concealed Vertical Rod Exit Device or Paneline Concealed Rod Exit Device (tested to +/- 65 psf Uniform Load).

2.4.3.5 Closer

Surface closer only.

2.4.3.6 Security Lock/Dead Lock

A/R MS 1850A lock with (2) A/R 1871 cylinder operated flushbolts.

2.4.3.7 Cylinder(s)/Thumbturn

Manufacturer standard.

2.4.3.8 Cylinder Guard

Manufacturer standard.

2.5 RELATED MATERIALS

2.5.1 Sealants

Refer to NASA Section 07920, "SEALANTS AND CALKINGS".

2.5.2 Glass

Refer to NASA Section 08810, "Glass."

2.6 FABRICATION

2.6.1 Entrance System Fabrication

Door corner construction shall consist of mechanical clip fastening, SIGMA deep penetration plug welds and 1-1/8" long fillet welds inside and outside of all four corners. Exterior glazing stop shall be hook-in type with EPDM glazing gaskets reinforced with non-stretchable cord. Interior glazing stop shall be mechanically fastened to the door member and it shall incorporate a silicone compatible spacer used with silicone sealant.

Accurately fit and secure joints and corners. Make joints hairline in appearance.

Prepare components with internal reinforcement for door hardware.

Arrange fasteners and attachments to conceal from view.

2.7 SOURCE QUALITY CONTROL

2.7.1 Source Quality

Provide aluminum entrances specified herein from a single source.

2.7.1.1 Building Enclosure System

When aluminum entrances are part of a building enclosure system, including storefront framing, windows, curtain wall system and related products, provide building enclosure system products from a single source manufacturer.

2.7.2 Fabrication Tolerances

Fabricate aluminum entrances in accordance with entrance manufacturer's prescribed tolerances.

PART 3 EXECUTION

3.1 EXAMINATION

3.1.1 Site Verification of Conditions

Verify substrate conditions (which have been previously installed under other sections) are acceptable for product installation in accordance with manufacturer's instructions.

Verify openings are sized to receive storefront system and sill plate is level in accordance with manufacturer's acceptable tolerances.

3.1.2 Field Measurements

Verify actual measurements/openings by field measurements before fabrication; show recorded measurements on shop drawings. Coordinate field measurements, fabrication schedule with construction progress to avoid construction delays.

3.2 INSTALLATION

Install entrance system in accordance with manufacturer's instructions and AAMA storefront and entrance guide specifications manual.

Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

Provide alignment attachments and shims to permanently fasten system to building structure.

Align assembly plumb and level, free of warp and twist. Maintain assembly dimensional tolerances aligning with adjacent work.

Set thresholds in bed of mastic and secure.

3.2.1 Adjusting

Adjust operating hardware for smooth operation.

3.2.2 Related Products Installation Requirements

3.2.2.1 Sealants (Perimeter)

Refer to Section 07920, "Sealants and Calkings".

3.2.2.2 Glass

Refer to NASA Section 08810, "Glass."

3.2.2.3 Reference

ANSI Z97.1, 16 CFR PART 1201 and GANA GM.

3.3 PROTECTION AND CLEANING

3.3.1 Protection

Protect installed product's finish surfaces from damage during construction. Protect aluminum storefront system from damage from grinding and polishing compounds, plaster, lime, acid, cement, or other harmful contaminants.

3.3.2 Cleaning

Repair or replace damaged installed products. Clean installed products in accordance with manufacturer's instructions prior to owner's acceptance. Remove construction debris from project site and legally dispose of debris.
